

Remove Docker

Remove Docker

To completely uninstall Docker:

Step 1

```
dpkg -l | grep -i docker
```

To identify what installed package you have:

Step 2

```
sudo apt-get purge -y docker-engine docker docker.io docker-ce docker-ce-cli docker-compose-  
plugin containerd.io docker-buildx-plugin  
sudo apt-get autoremove -y --purge docker-engine docker docker.io docker-ce docker-compose-  
plugin containerd.io docker-buildx-plugin
```

The above commands will not remove images, containers, volumes, or user created configuration files on your host. If you wish to delete all images, containers, and volumes run the following commands:

```
sudo rm -rf /var/lib/docker /etc/docker  
sudo rm /etc/apparmor.d/docker  
sudo groupdel docker  
sudo rm -rf /var/run/docker.sock  
sudo rm -rf /var/lib/containerd  
sudo rm -r ~/.docker
```

You have removed Docker from the system completely.
